

Private Residence South London

Architect: Lewandowski Willcox

Product: Bespoke Timber Shutters

This private residence was designed with focus on creating an introverted building that drew a considerable amount of its light from above or from windows facing private internal courtyards. With the site surrounded by other properties avoiding overlooking was also critical to the design.

Both static and sliding timber shutters, designed and installed by Contrasol, combine to create an effective and eco friendly addition to this development and compliment the building to produce warm and appealing design aesthetics.

The property has been constructed to achieve Code for Sustainable Homes Level 3 standards. It utilises air source heating, passive ventilation and rainwater harvesting
