

Courtyard by Marriott, Exeter Sandy Park Hotel

Architect: KTA
Product: Bespoke Fins

CASE STUDY

Contrasol worked closely with both the Architects and main contractors to design, manufacture and install bespoke aluminium fins to the façade of this hotel. Adjacent to the Exeter Rugby Club and surrounded by rolling countryside, this 250 bedroom hotel is designed over 6 levels. The key ambition for the project was to create a striking aesthetic while also providing a sustainable solution to solar gain and shading. The vertical bronzed fins are not only visually impactful but also provide privacy and a solar shading solution that allows for natural light and comfort for its occupants.
