

Whitehill & Bordon Enterprise Park, Bordon

Architect: Barton Willmore (Stantec)

Product: Aluminium Vertical Fins (timber finish) / Louvres

**CASE STUDY**

Contrasol have completed the design, manufacture and installation of a range of systems across this new development at Whitehill & Bordon Enterprise Park. The highlight being the large bespoke 600mm deep vertical fins, free spanning 7.5m high. These fins are fixed across the main office building façade providing one of main features of the development in addition to functional solar shading.

Smaller vertical fins from our standard range, with the same timber effect finish are used around the car park structure to help tie the two buildings together and help them compliment the surrounding area. The final element consisted of our louvre screen system to the roof of the office building, providing a cost effective and aesthetic finish around the external plantroom.
