

### CASE STUDY

Middle Hillgate, Stockport features Contrasol's manually rotating 100CF fin. The Fin acts both as a balustrade whilst also performing as a functional solar shading system. This allows the tenant to adjust the fins to their required lighting needs. Working with CSC Construction Ltd, Contrasol were specified to replace a timber balustrade that was deemed too dark by the architect. Liaising with the client and contractor, we offered this light and highly convenient system to enlighten these housing developments interiors at the same time reducing both unwanted heat gain and glare.
