

Sanitov House Boat

Architect: Sanitov Studios
 Product: 200CF Aerofoil Fin

CASE STUDY

From concept to completion, Contrasol worked directly with Sanitov studios on this pioneering project. Our brief was to design and install a highly bespoke system of vertically stacked 200CF Aerofoil Fin to this modern day House Boat.

Developed within Sanitovs' Urdaimonia Projects this House Boat features a full range of sustainable and contemporary design with Brise Soleil taking centre stage. As well as providing natural shading to the living space, the dramatic shapes and lines help break up the box nature of the boat, providing an important balance between form and function.
